Case History Spotlight #27: Cutting Costs on Septic Tank Maintenance

Image courtesy of Adobe Stock

A homeowner in Ohio pumped out his 400 liter (1500 gal) septic tank for \$430 USD. He began regularly flushing one [ECO-SEPT™](#) pouch down his toilet every month and continued to do so for the next five years. These pouches contain diverse microbiology designed to activate biodegradation of solid waste. Although septic tanks usually need to be pumped out every two years, this tank continued to pass inspections and, after five years, still had not required pumping, saving the homeowner several hundred dollars on routine maintenance costs at a small fraction of pumping costs.
