

NEWS ALERT

Meet Our Newest Expert in Bionetix® Bugs and Biotechnology!

When you need answers, it is great to know an expert in the industry. That is why David Sanchez Llano is such an outstanding addition to our Inside Sales and Product Support team at [Bionetix® International](#). When David joined Bionetix® in October, he already knew what he was talking about. David earned his master's degree in biology (specializing in industrial and environmental microbiology) and spent the last decade studying "bugs." He even patented his own biocontrol product!

At Bionetix®, David plans to put his in-depth knowledge of microbiology to good use by providing expert support for Bionetix® clients who need to tackle cleanup and agricultural challenges in an environmentally friendly manner. David aims to provide speedy and precise knowledge of our portfolio of microbial products with a special focus on the benefits of key active ingredients. His appreciation for the technology behind each product is evident in his choice of a favorite product, [AQUA-FEED™](#), which he describes as "an authentic piece of art" because of its unique composition that sets it apart from other probiotic feeds on the market.

Bionetix

David is driven to unlock new opportunities and expand our reach by building relationships of trust with overseas distributors and adding product registration in multiple countries for the benefit of even more users. He is also fluent in Spanish, significantly enhancing our ability to connect with clients in Latin America. Contact him today for expert insight and support where you need it most!

David Sanchez Llano, M.Sc., Mcb. A.
