

One-Step Solution for Protection Against Flash Corrosion

Cortec's (St. Paul, Minnesota, USA) best-selling cleaner/degreaser, VpCI-414, is designed to tackle dirt, grime, and even stubborn temporary coatings in one powerful step. This water-soluble formula is

safe for various metals and painted surfaces, making it a versatile cleaning solution. Here's what makes VpCI-414 stand out: heavy-duty cleaning that removes oil, grease, and cosmoline-like products; up to 48 hours of multi-metal corrosion protection after parts have been cleaned; versatile application that makes it ideal for horizontal and vertical surfaces and even clings to overhead areas; and a safe and cost-effective formula made with biodegradable materials, making it easy to dilute for different levels of cleaning intensity. Available in concentrated or ready-to-use form, VpCI-414 is a perfect choice for those seeking an efficient and environmentally responsible way to clean and protect metals such as carbon, stainless, and galvanized steel, cast iron, copper, and brass. Nonflammable VpCI-414 does not affect painted surfaces and remains active even if left to dry. It is mostly used at room temperature—thus reducing energy consumption—but it can also be used in a heated bath for heavy hydrocarbons. The viscous liquid will cling to ceilings and vertical surfaces in a ready-to-use formulation. The product is highly effective at low concentrations and can be diluted as low as 1% by volume. It is easily applied using basic personal protective equipment. Tel: 1 800-426-7832, web site: www.cortecvci.com.
